

UNFCCC-Side event

Gender and Climate Change research: gaps, questions, and potentials

7 June 2010 | 18-19:30 | Room SOLAR (MoE)

Gendered knowledge is the basis for successful planning, implementation and evaluation of effective climate change mitigation and adaptation measures, as well as for gender-sensitive policy making.

Current knowledge is fragmented and often not tailored to the needs of politicians and policy makers. The side event will introduce the state of the art in gender and climate change research in general and more specific in particular research fields, discuss questions arising from recent studies and present suggestions how to improve the situation.

Panel

Introduction and background

Gotelind Alber, GenderCC - Women for Climate Justice

Disasters, conflict, migration: a complex relationship

Maira Zahur / Gender & Disaster Network GenderCC, Pakistan

CDM funding for household and community level projects - a chance to increase women's access to global climate funding?
