

The recycling of brominated flame retardants contaminates children's toys

Miroslava Jopkova, ArniKa, CZ

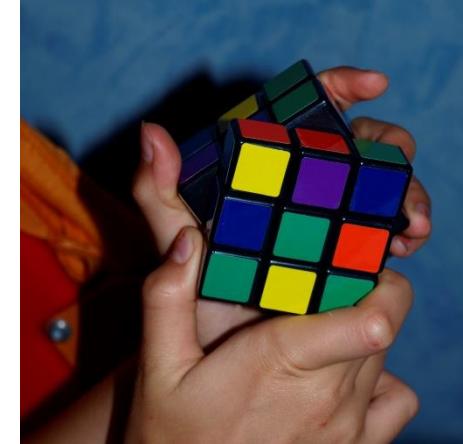

Sixth Ministerial Conference on Environment and Health,
Ostrava, Czech Republic

Public Interest in Brominated Flame Retardants

- Many different consumer products in homes
- Commercial Penta-, Octa-, DecaBDE and HBCD are POPs
- Damage to the nervous (children IQ) and reproductive systems
- Toxic flame retardants increase danger of death in fires
- Dioxin and furan formation (when recycled or incinerated)

Impacts of Recycling Articles containing PBDEs

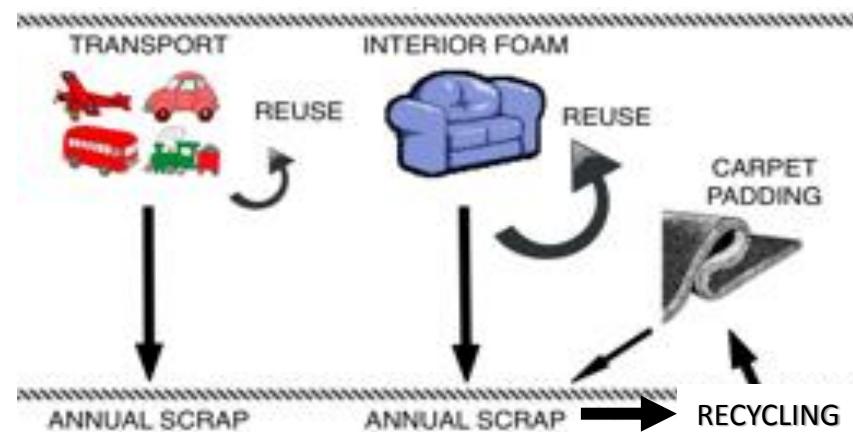

- What is the flow of PBDEs in recycled materials?
- What articles are contaminated?

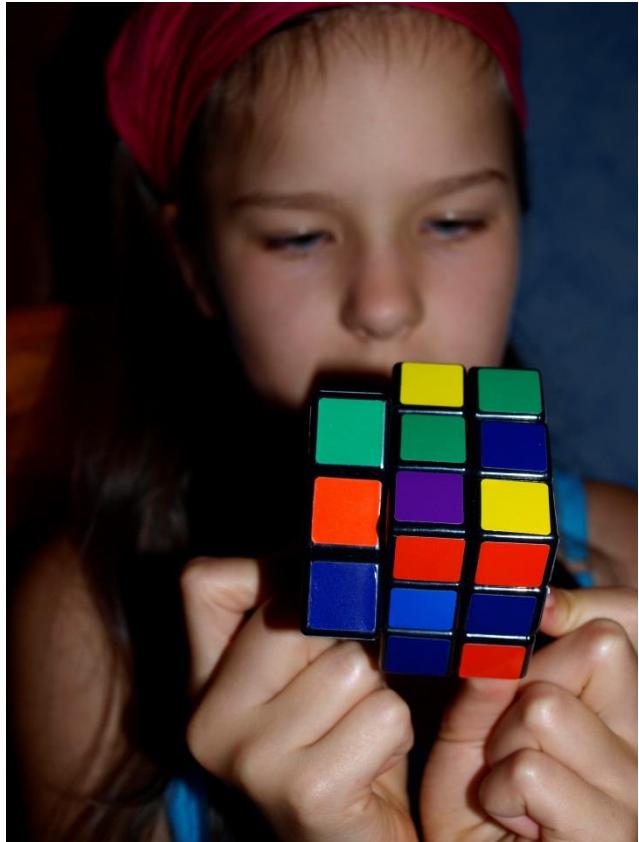

Contamination of Plastic Flow from Recycling of PentaBDE

- Carpet padding made of PUR foam scraps which are bound together
- Samples collected in: Canada, Hungary, Nepal, Kyrgyzstan, Thailand, and USA

BDE	Samples containing specific BDE	Range (ppm)
PentaBDE	77%	1 – 1130
OctaBDE	65%	1 – 263
DecaBDE	89%	1 – 166

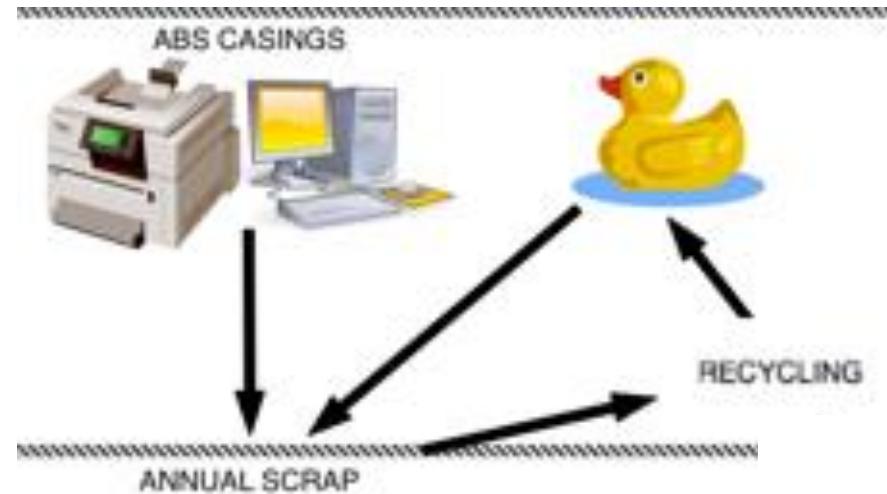

Contamination of Plastic Flow from Recycling of Octa-, DecaBDE and HBCD

Discussion and Conclusions

- PentaBDE used in upholstering is recycled into PUR carpet padding
- OctaBDE, DecaBDE, and HBCD used in plastics for electronics are recycled into plastic children's toys
- The Stockholm Convention POPs Review Committee (POPRC) correctly predicted the dispersal of PBDEs
- The results add to concerns about the existing Stockholm Convention recycling exemption
- The neurotoxic effects of PBDEs are similar to those observed for PCBs
- Recycling of POPs material decreases credibility of recycling
- Toxic substances need to be avoided from material flow to maintain safe circular economy
